	Dec qtr	2,655,755	9.2	2.7	5,987,450	2.5	5.3

(a) Interstate exports and imports are compiled using a classification based on the Standard International Trade Classification (Revision 3).

(b) In compiling the estimates of Interstate Trade for OESR, the ABS uses a partial coverage census based on businesses with more than \$400,000 of interstate trade. This collection is now under review due to frame and coverage issues. New businesses are not well represented, so the estimates are likely to be understated. The estimates are prepared for use in the compilation of Treasury's State Accounts and users should exercise strong caution in their independent use.

(c) September quarter 2006 figures revised due to a systems error.

## Key Statistics Explanatory Notes

### Sampling errors in Labour Force Survey

The estimates in **Labour Force, Australia** (cat. no. 6202.0) are based on a sample survey. Because the entire population is not enumerated, the published estimates and the movements derived from them are subject to sampling variability. Standard errors give a measure of this variability and appear on pages 27 and 28 of **Labour Force, Australia** (cat. no. 6202.0).

The 95% confidence intervals below provide another way of looking at the variability inherent in estimates from sample surveys. The interval bounded by the two limits is the 95% confidence interval. A 95% confidence interval has a 95% chance of including the true value of the estimate.

### MOVEMENTS IN SEASONALLY ADJUSTED SERIES BETWEEN FEBRUARY AND MARCH 2007 - QUEENSLAND

	Monthly change	95% Confidence interval		
Total employment	10,300	34,500	to	-13,900
Total unemployment	100	12,500	to	-12,300
Unemployment rate	0.0	0.6	to	-0.6
Participation rate	0.2	1.0	to	-0.6

[Back to top](#)

## GST on Building Activity

Within building activity statistics, purchasers of residential structures are unable to deduct GST from the purchase price. For non-residential structures, the reverse is true. While the ABS collects all building activity data on a GST inclusive basis, it publishes value data inclusive of GST in respect of residential construction and exclusive of GST in respect of non-residential construction.

It is appropriate to add the residential and non-residential components to derive total building activity. Valuation of the components of the total is consistent, since, for both components, the value data is recorded inclusive of non-deductible GST paid by the purchaser. As such, total building activity includes the non-deductible GST payable on residential building.
